4	2017-12-12	NULL <sub>1</sub>	UDM	NULL <sub>2</sub>	<i>if NULL<sub>0</sub> is "UDM"</i>

Remember **c-tables**:

Member  $\bowtie$  Booking

id	date	teacher	class	room
2	2017-11-28	NULL <sub>1</sub>	UDM	NULL <sub>2</sub>
3	2017-12-05	NULL <sub>1</sub>	UDM	NULL <sub>2</sub>
4	2017-12-12	NULL <sub>1</sub>	UDM	NULL <sub>2</sub>

*if NULL<sub>0</sub> is "UDM"*

→ **Variant:** Only allow NULLS in the conditions

## NULLs in conditions

- The **possible tuples** are exactly the **rows**
- Each row may either be **kept** or **deleted**
  - Depends on the **condition**

## NULLs in conditions

- The **possible tuples** are exactly the **rows**
  - Each row may either be **kept** or **deleted**
    - Depends on the **condition**
- **Finite** number of possible worlds

## NULLs in conditions

- The **possible tuples** are exactly the **rows**
  - Each row may either be **kept** or **deleted**
    - Depends on the **condition**
- **Finite** number of possible worlds
- at most  $2^N$  if we have  $N$  rows

## Example

Boolean c-tables

Expressiveness

## Boolean c-tables

With **Boolean c-tables**, we impose:

- the possible values of each **NULL<sub>i</sub>** are **True** and **False**

# Boolean c-tables

With **Boolean c-tables**, we impose:

- the possible values of each **NULL<sub>i</sub>** are **True** and **False**

We can **simplify notation**

- We write the **NULLs** as **Boolean variables**  $x_i$
- We replace  $x_i = \text{True}$  by just  $x_i$
- We replace  $x_i = \text{False}$  by  $\neg x_i$

# Boolean c-tables

With **Boolean c-tables**, we impose:

- the possible values of each **NULL<sub>i</sub>** are **True** and **False**

We can **simplify notation**

→ We write the **NULLs** as **Boolean variables**  $x_i$

→ We replace  $x_i = \text{True}$  by just  $x_i$

→ We replace  $x_i = \text{False}$  by  $\neg x_i$

→ We can **rewrite**:

- $x_i = x_j$  to  $(x_i \wedge x_j) \vee (\neg x_i \wedge \neg x_j)$
- $x_i \neq x_j$  to  $(x_i \wedge \neg x_j) \vee (\neg x_i \wedge x_j)$

# Boolean c-tables

With **Boolean c-tables**, we impose:

- the possible values of each **NULL<sub>i</sub>** are **True** and **False**

We can **simplify notation**

→ We write the **NULLs** as **Boolean variables**  $x_i$

→ We replace  $x_i = \text{True}$  by just  $x_i$

→ We replace  $x_i = \text{False}$  by  $\neg x_i$

→ We can **rewrite**:

- $x_i = x_j$  to  $(x_i \wedge x_j) \vee (\neg x_i \wedge \neg x_j)$
- $x_i \neq x_j$  to  $(x_i \wedge \neg x_j) \vee (\neg x_i \wedge x_j)$

→ The conditions become **Boolean expressions**

## Theorem

*We can always rewrite a c-table having **NULLS** only in conditions to a Boolean c-table.*

## Theorem

*We can always rewrite a c-table having **NULLS** only in conditions to a Boolean c-table.*

**Proof:** Two steps:

1. We can pick the **NULLS** in a **finite domain**
2. We can rewrite any **finite domain** to True and False

## Step 1: Reducing to a finite domain

- We can choose among **infinitely many** values for the **NULLs**
- However, the values only appear in the **conditions**:
  - $NULL_i = NULL_j$
  - $NULL_i = "c"$
  - Boolean combinations

## Step 1: Reducing to a finite domain

- We can choose among **infinitely many** values for the **NULLs**
- However, the values only appear in the **conditions**:
  - $NULL_i = NULL_j$
  - $NULL_i = "c"$
  - Boolean combinations
- We call two assignments of values to **NULLs equivalent** if all conditions evaluate to the **same**

## Step 1: Reducing to a finite domain (example)

→ Call two assignments of values to **NULLs equivalent** if all conditions evaluate to the **same**.

Consider the following:

- $NULL_1 = NULL_2$
- $NULL_2 = "c"$

→ **E.g.:** The assignment  $(a, d)$  is **equivalent** to  $(b, d)$

## Step 1: Reducing to a finite domain (example)

→ Call two assignments of values to **NULLs equivalent** if all conditions evaluate to the **same**.

Consider the following:

- $NULL_1 = NULL_2$
- $NULL_2 = "c"$

→ **E.g.:** The assignment  $(a, d)$  is **equivalent** to  $(b, d)$

→ What are the possible **assignments**?

## Step 1: Reducing to a finite domain (example)

→ Call two assignments of values to **NULLs equivalent** if all conditions evaluate to the **same**.

Consider the following:

- $NULL_1 = NULL_2$
- $NULL_2 = "c"$

→ **E.g.:** The assignment  $(a, d)$  is **equivalent** to  $(b, d)$

→ What are the possible **assignments**?

- $(c, c)$

- **true, true**

## Step 1: Reducing to a finite domain (example)

→ Call two assignments of values to **NULLs equivalent** if all conditions evaluate to the **same**.

Consider the following:

- $NULL_1 = NULL_2$
- $NULL_2 = "c"$

→ **E.g.:** The assignment  $(a, d)$  is **equivalent** to  $(b, d)$

→ What are the possible **assignments**?

- $(c, c)$ 
  - **true, true**
- $(x, c)$  with  $x \neq c$ 
  - **false, true**

## Step 1: Reducing to a finite domain (example)

→ Call two assignments of values to **NULLs equivalent** if all conditions evaluate to the **same**.

Consider the following:

- $NULL_1 = NULL_2$
- $NULL_2 = "c"$

→ **E.g.:** The assignment  $(a, d)$  is **equivalent** to  $(b, d)$

→ What are the possible **assignments**?

- $(c, c)$ 
  - **true, true**
- $(x, c)$  with  $x \neq c$ 
  - **false, true**
- $(x, x)$  with  $x \neq c$ 
  - **true, false**

## Step 1: Reducing to a finite domain (example)

→ Call two assignments of values to **NULLs equivalent** if all conditions evaluate to the **same**.

Consider the following:

- $NULL_1 = NULL_2$
- $NULL_2 = "c"$

→ **E.g.:** The assignment  $(a, d)$  is **equivalent** to  $(b, d)$

→ What are the possible **assignments**?

- $(c, c)$ 
  - **true, true**
- $(x, c)$  with  $x \neq c$ 
  - **false, true**
- $(x, x)$  with  $x \neq c$ 
  - **true, false**
- $(y, x)$  with  $x \neq c$  and  $y \neq x$ 
  - **false, false**

## Step 1: Reducing to a finite domain (concluding)

- Consider all **constants** that appear:  $\mathcal{C}$
- Consider  $N$  different values  $\mathcal{V}$ , where  $N$  is the number of **NULLs**

## Step 1: Reducing to a finite domain (concluding)

- Consider all **constants** that appear:  $\mathcal{C}$
  - Consider  $N$  different values  $\mathcal{V}$ , where  $N$  is the number of **NULLS**
- Gives our **domain**  $\mathcal{D} := \mathcal{C} \sqcup \mathcal{V}$

## Step 1: Reducing to a finite domain (concluding)

- Consider all **constants** that appear:  $\mathcal{C}$
  - Consider  $N$  different values  $\mathcal{V}$ , where  $N$  is the number of **NULLs**
- Gives our **domain**  $\mathcal{D} := \mathcal{C} \sqcup \mathcal{V}$

### Lemma

*For any  $c$ -table with **NULLs** only in conditions, its set of possible worlds is the same:*

- *under the standard semantics*
- *when **NULLs** range over the finite  $\mathcal{D}$ .*

## Step 1: Reducing to a finite domain (concluding)

- Consider all **constants** that appear:  $\mathcal{C}$
  - Consider  $N$  different values  $\mathcal{V}$ , where  $N$  is the number of **NULLs**
- Gives our **domain**  $\mathcal{D} := \mathcal{C} \sqcup \mathcal{V}$

### Lemma

*For any  $c$ -table with **NULLs** only in conditions, its set of possible worlds is the same:*

- *under the standard semantics*
  - *when **NULLs** range over the finite  $\mathcal{D}$ .*
- For **simplicity**, let's **pad**  $\mathcal{D}$  to have exactly  $2^k$  values for some  $k$

## Step 2: Rewriting to Boolean variables

- The **domain** has size  $2^k$

## Step 2: Rewriting to Boolean variables

- The **domain** has size  $2^k$
- Write its **values** in **binary**
- Encode each  $\text{NULL}_i$  to variables  $x_i^1, \dots, x_i^k$

## Step 2: Rewriting to Boolean variables

- The **domain** has size  $2^k$
  - Write its **values** in **binary**
  - Encode each  $\text{NULL}_i$  to variables  $x_i^1, \dots, x_i^k$
- Can we **translate** the conditions?

## Step 2: Rewriting to Boolean variables (example)

- $\text{NULL}_7 = 001$

## Step 2: Rewriting to Boolean variables (example)

- $\text{NULL}_7 = 001$   
→  $x_7^1 = 0$  and  $x_7^2 = 0$  and  $x_7^3 = 1$

## Step 2: Rewriting to Boolean variables (example)

- $\text{NULL}_7 = 001$ 
  - $x_7^1 = 0$  and  $x_7^2 = 0$  and  $x_7^3 = 1$
  - $\neg x_7^1 \wedge \neg x_7^2 \wedge x_7^3$

## Step 2: Rewriting to Boolean variables (example)

- $\text{NULL}_7 = 001$ 
  - $x_7^1 = 0$  and  $x_7^2 = 0$  and  $x_7^3 = 1$
  - $\neg x_7^1 \wedge \neg x_7^2 \wedge x_7^3$
- $\text{NULL}_7 \neq 001$

## Step 2: Rewriting to Boolean variables (example)

- $\text{NULL}_7 = 001$ 
  - $x_7^1 = 0$  and  $x_7^2 = 0$  and  $x_7^3 = 1$
  - $\neg x_7^1 \wedge \neg x_7^2 \wedge x_7^3$
- $\text{NULL}_7 \neq 001$ 
  - **negate** the above

## Step 2: Rewriting to Boolean variables (example)

- $\text{NULL}_7 = 001$ 
  - $x_7^1 = 0$  and  $x_7^2 = 0$  and  $x_7^3 = 1$
  - $\neg x_7^1 \wedge \neg x_7^2 \wedge x_7^3$
- $\text{NULL}_7 \neq 001$ 
  - **negate** the above
- $\text{NULL}_7 = \text{NULL}_8$

## Step 2: Rewriting to Boolean variables (example)

- $NULL_7 = 001$ 
  - $x_7^1 = 0$  and  $x_7^2 = 0$  and  $x_7^3 = 1$
  - $\neg x_7^1 \wedge \neg x_7^2 \wedge x_7^3$
- $NULL_7 \neq 001$ 
  - **negate** the above
- $NULL_7 = NULL_8$ 
  - $x_7^1 = x_8^1$  and  $x_7^2 = x_8^2$  and  $x_7^3 = x_8^3$

## Step 2: Rewriting to Boolean variables (example)

- $NULL_7 = 001$ 
  - $x_7^1 = 0$  and  $x_7^2 = 0$  and  $x_7^3 = 1$
  - $\neg x_7^1 \wedge \neg x_7^2 \wedge x_7^3$
- $NULL_7 \neq 001$ 
  - **negate** the above
- $NULL_7 = NULL_8$ 
  - $x_7^1 = x_8^1$  and  $x_7^2 = x_8^2$  and  $x_7^3 = x_8^3$
- $NULL_7 \neq NULL_8$

## Step 2: Rewriting to Boolean variables (example)

- $NULL_7 = 001$ 
  - $x_7^1 = 0$  and  $x_7^2 = 0$  and  $x_7^3 = 1$
  - $\neg x_7^1 \wedge \neg x_7^2 \wedge x_7^3$
- $NULL_7 \neq 001$ 
  - **negate** the above
- $NULL_7 = NULL_8$ 
  - $x_7^1 = x_8^1$  and  $x_7^2 = x_8^2$  and  $x_7^3 = x_8^3$
- $NULL_7 \neq NULL_8$ 
  - **negate** the above

# Concluding

1. We have moved to a **finite domain**  
(without changing the relation)

# Concluding

1. We have moved to a **finite domain**  
(without changing the relation)
2. We have **rewritten** to Boolean variables  
(we changed the relation)

# Concluding

1. We have moved to a **finite domain**  
(without changing the relation)
  2. We have **rewritten** to Boolean variables  
(we changed the relation)
- It **suffices** to study Boolean c-tables

# Conclusion

We have studied:

- First:
  - Codd tables with NULLS
  - v-tables with named NULLS
  - c-tables with named NULLS and conditions

# Conclusion

We have studied:

- **First:**
  - Codd tables with NULLs
  - v-tables with named NULLs
  - c-tables with named NULLs and conditions
- **Then:**
  - c-tables with NULLs only in conditions
  - **Boolean** c-tables: Boolean variables

# Conclusion

We have studied:

- First:
  - Codd tables with NULLs
  - v-tables with named NULLs
  - c-tables with named NULLs and conditions
- Then:
  - c-tables with NULLs only in conditions
  - Boolean c-tables: Boolean variables

We have shown:

- Any c-table with NULLs only in conditions **rewrites** to a Boolean c-table
- Boolean c-tables **capture** all finite uncertain relations
- Boolean c-tables are a **strong representation system**
- c-tables are a **strong representation system**
